Address: 115/57 Trieu Khuc, Thanh Tri, Ha Noi

SUMMARY

Passionate about programming and learning data structure & algorithm
Capable of working independently
Expect to become a great Software Engineer by always looking for new adventures

EDUCATION

Hanoi University of Science and Technology
Major: *Software Engineering*
- CPA: 3.41 / 4.0

2016 – 01/2021

EXPERIENCES

Project at school: *student*

11/2019 – 4/2020

Online food booking Application
- An application can communicate the users to the shippers by realtime booking function
- Our team had 5 members
- I built the backend of the application
- We used MySQL, Node.js, Socket.io and Android
- Repository: https://github.com/anhphuong98/booking_food_server

Laptop saling website
- A website helps the customers buy laptops online
- I built both the frontend and the backend of the website
- I used MySQL, Reactjs and Node.js
- Repository: https://github.com/anhphuong98/pp_web_laptop

Thu Do Multimedia JSC: *intern*

5/2020– 8/2020

Tool for VNPT outbound
- A website helps the manager search and make statistics on VNPT services
- I build both the frontend and the backend of the website
- I used multiple database with MySQL, Reactjs, Node.js and JsonDB

Tool send SMS core
- A tool is used to send messages to customers through communicating with network operator
- I used Node.js to build this tool
- My tool is faster than the old version one that is build by PHP and It is replaced to be used

Viet Nam Information and Communication Security Technology JSC (VNIST): *graduation project*

Manufacturing plan managing website
- A management website was integrated into the digital workspace system – dxclan.com
- I built both the frontend and the backend of the website
- I used multiple database with MongoDB, Reactjs and Node.js
- The topic won the best presentation at the graduation project protection ceremony on January 26, 2021

Bravebits Viet Nam JSC (Bravebits): *fulltime staff*

PageFly Page Builder
- A start up project is built on Shopify Application Store. It helps user drag and drop elements to build their online store
- I join team to build the frontend of the application
- My works are:
  - Building some new functions of the application such as Dynamic Breadcrumb, Global Styling, Effect Style…
  - Integrating some third parties: Wishlist, PickyStory, Ryviu Product…
  - Optimizing code and fixing bugs of application
  - Supporting customers and fixing their store

Other projects: adriennguyen.github.io/portfolio

SKILLS	Programming languages: Javascript, Typescript, Java, C Database management system: MySQL, MongoDB Programming technology: Node.js, Reactjs Productivity tools: Git
FOREIGN LANGUAGES	English • Read well • Basic communication
INTERESTS	Reading Book Playing football Playing video game

ACTIVITIES

Alibaba English Club

A club where people teach each other about english, working group and confidence
